DIVISION OF SCIENCE RESOURCES STUDIES

The Division of Science Resources Studies (SRS) fulfills the legislative mandate of the National Science Foundation Act to ...

provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources and to provide a source of information for policy formulation by other agencies of the Federal Government...

To carry out this mandate, SRS designs, supports, and directs periodic surveys as well as a variety of other data collections and research projects. These surveys yield the materials for SRS staff to compile, analyze, and disseminate quantitative information about domestic and international resources devoted to science, engineering, and technology.

If you have any comments or suggestions about this or any other SRS product or report, we would like to hear from you. Please direct your comments to:

ACKNOWLEDGMENTS

The 1998 Survey of Scientific and Engineering Research Facilities at Colleges and Universities was developed and guided by Ann T. Lanier, Senior Science Resources Analyst, Research and Development Statistics Program (RDS), Division of Science Resources Studies (SRS), National Science Foundation (NSF), under the direction of John Jankowski, RDS Program Director. Guidance and review were provided by Jeanne Griffith, Director, SRS. Leslie Christovich, Director, Academic Infrastructure Project, SRS guided final drafts of the report through review. The text was edited by Anne Houghton, Publications Manager, SRS with assistance from Julia Harriston and Tanya Gore. Laurie Leonard and Jerrilyn Heller of EDO Technology Services and Analysis provided composition services for this report.

The National Institutes of Health (NIH) co-sponsored the project and provided significant financial support as well as guidance and review, under the direction of Paul Seder, NIH Office of Science Policy and Technology Transfer and Judith Vaitukaitis, M.D., Director, National Center for Research Resources.

An Expert Advisory Panel contributed to the survey design, the analysis plan, and the review of this report. Members included the following:

- Lynda Brewer, Educational Facility Planner, University of California-Irvine
- Jaleh Daie, Professor of Botany, University of Wisconsin-Madison
- William A. Daigneau, Associate Vice President and Chief Facilities Officer, University of Texas—MD Anderson Cancer Center
- John Daniel, Professor of Sociology, Howard University
- Bruce Gillars, Manager, Space Planning/Management, University of Utah
- David A. Goodwin, Director of Capital Budgeting, Virginia Commonwealth University
- Robert McGhee, Institute Architect and Senior Facilities Officer, Howard Hughes Institute

- Alexander McQuilkin, Associate Vice President, Facilities, Chapman University
- Julie T. Norris, Director, Office of Sponsored Programs, Massachusetts Institute of Technology
- Earl S. Richardson, President, Morgan State University
- Patricia Seller-Wolff, Associate, Kirksey and Partners Architects
- James E. Swartz, Vice President for Academic Affairs, Dean of the College, and Professor of Chemistry, Grinnell College
- William R. Tibbs, Jr., Principal, Tibbs Associates
- Jacqueline Wender, Assistant to the President, Stanford University
- Karen Yarbrough, Vice President for Research and Planning, The University of Southern Mississippi

In addition, NSF sought advice on the development of the survey from higher education association and university representatives, who graciously provided information of considerable importance to the success of the project.

The 1998 survey was conducted by The Gallup Organization of Rockville, Maryland, under contract to NSF (Contract Number SRS-9317363). Gregory Gaertner served as Gallup's overall Project Director; Jennifer Spielvogel led field operations; Manas Chattopadhyay was the project statistician; and Yonghe Yang directed the data processing for the survey.

The American Institutes for Research (AIR) served as the subcontractor for the project. Rita Kirshstein headed the AIR team, which included Barbara Lovitts, Elizabeth Rowe, Michael Simone, and Sterlina D. Harper.

NSF and the project team also acknowledge the indispensable contributions of the many officials and staff members at the sample institutions who completed the survey questionnaires.

OVERVIEW	1
INTRODUCTION	17
ACRONYMS	21
 CHAPTER 1—AMOUNT AND DISTRIBUTION OF RESEARCH SPACE	 23
Highlights	23
Introduction	23
Findings	24
Amount of S&E Space	24
Amount of S&E Space Used for Research	24
Changes in the Amount of S&E Research Space	25
Amount of Leased S&E Space	26
Distribution of Research Space Across S&E Fields	26
S&E Research Space by Field	27
 CHAPTER 2—ADEQUACY OF THE AMOUNT OF RESEARCH SPACE AND ITS CONDITION	 29
Highlights	29
Introduction	29
Findings	30
Adequacy of the Amount of S&E Research Space for Current Research Commitments	30
Need for Additional S&E Research Space	31
Condition of S&E Research Space	32
Amount of S&E Research Space in Each Field Requiring Either Major Renovation or Replacement	 33
 CHAPTER 3—THE CONSTRUCTION OF S&E RESEARCH SPACE	 35
Highlights	35
Introduction	35
Findings	36
Amount of New S&E Research Space Under Construction	36
Funds Committed to the Construction of S&E Research Space	36
Funds Scheduled for the Construction of S&E Research Space and Central Campus Infrastructure	 38
Colleges and Universities Starting S&E Construction Projects	39
Fields in Which Construction Projects Started	40
Funds Committed to S&E Research Space Construction Projects in Different Fields	 40
Funds Committed to Nonfixed Equipment Costing Over \$1 Million in New Construction Projects	 43

CHAPTER 4—THE REPAIR/RENOVATION OF S&E RESEARCH FACILITIES	45
Highlights	45
Introduction	45
Findings	46
Funds Committed to the Repair/Renovation of S&E Research Facilities	46
Funds Committed to Repair/Renovation Projects as a Proportion of Total Capital Projects	48
Funds Scheduled for the Repair/Renovation of S&E Research Facilities and Central Campus Infrastructure	48
Colleges and Universities Starting S&E Repair/Renovation Projects	50
Fields in Which Repair/Renovation Projects Started	51
Funds Committed to S&E Research Facilities Repair/Renovation Projects in Different Fields	52
Funds Committed to Nonfixed Equipment Costing Over \$1 Million in Repair/Renovation Projects	54
CHAPTER 5—SOURCES OF FUNDS FOR S&E RESEARCH FACILITIES PROJECTS	55
Highlights	55
Introduction	55
Findings	56
Sources of Funds for the Construction of S&E Research Facilities	56
Sources of Funds for the Construction of S&E Research Facilities at Public Institutions	57
Sources of Funds for the Construction of S&E Research Facilities at Private Institutions	59
Sources of Funds for the Repair/Renovation of S&E Research Facilities	59
Sources of Funds for the Repair/Renovation of S&E Research Facilities at Public Institutions	62
Sources of Funds for the Repair/Renovation of S&E Research Facilities at Private Institutions	62
Amount of Indirect Costs Recovered from Federal Grants Committed to Construction and Repair/Renovation Projects	64
Summary of Major Sources of Funds	66
CHAPTER 6—DEFERRED CONSTRUCTION AND REPAIR/RENOVATION	69
Highlights	69
Introduction	69
Findings	70
Deferred Capital Projects for S&E Research Facilities	70
Deferred Project Costs and Capital Project Commitments	71
Deferred Need Estimates	71
Deferred Needs by S&E Field	71
Deferred Capital Projects for Central Campus Infrastructure	73
CHAPTER 7—MINORITY-SERVING INSTITUTIONS	75
Highlights	75
Introduction	75
Findings	76

	<i>Page</i>
S&E Space in Minority-Serving Institutions	76
Adequacy of the Amount of S&E Research Space and Its Condition in Minority-Serving Institutions	76
New S&E Facilities Construction and Repair/Renovation Projects at Minority-Serving Institutions	76
Minority-Serving Institutions' Need for S&E Research Facilities	79
A Look at HBCUs Over Time	79
Amount and Distribution of S&E Research Space	79
Construction of S&E Research Space	81
The Repair/Renovation of S&E Research Facilities	81
Sources of Funds for S&E Construction and Repair/Renovation Projects	82
 CHAPTER 8—ANIMAL RESEARCH FACILITIES	 85
Highlights	85
Introduction	85
Findings	86
 Amount of Space Devoted to Animal Research	 86
Distribution of Animal Research Space at Colleges and Universities by Biosafety Level	87
Amount of Animal Research Space Scheduled for Construction and Repair/Renovation	88
Funds Scheduled for the Construction and Repair/Renovation of Animal Research Space	89
 CHAPTER 9—BIOMEDICAL RESEARCH FACILITIES	 91
Highlights	91
Introduction	91
Findings	91
 Amount of Biomedical Research Space	 91
Adequacy of the Amount of Biomedical Research Space and Its Condition	93
Construction of Biomedical Research Space	95
Repair/Renovation of Biomedical Research Space	97
Sources of Funds for the Construction of Research Facilities at Biomedical Research-Performing Institutions	97
Sources of Funds for the Repair/Renovation of Research Facilities at Biomedical Research-Performing Institutions	98
Biomedical Research-Performing Institutions' Need for Research Facilities	100
Biomedical Research Facilities at Historically Black Colleges and Universities	100
Animal Research Facilities at Biomedical Research-Performing Institutions	102

LIST OF OVERVIEW TABLES

<i>Table</i>		<i>Page</i>
1	Amount of space by institution type: 1998	2
2	Existing and needed science and engineering research space by field: 1998	3
3	Construction and repair/renovation activity by science and engineering field: 1996–97	6
4	Source of funds to construct and repair/renovate science and engineering research space: 1996–97	7
5	Source of funds to construct and repair/renovate science and engineering research space at minority-serving institutions: 1996–97	9

LIST OF TEXT TABLES

1-1	Amount of instructional and research space by institution type: 1998	24
1-2	Science and engineering research space utilization by institution type: 1998	25
1-3	Trends in the amount of science and engineering research space by institution type: 1988–98	25
1-4	Trends in the amount of leased science and engineering research space by institution type: 1988–98	26
1-5	Percentage of institutions with science and engineering research space by institution type and field: 1998	27
1-6	Trends in the amount of science and engineering research space by field: 1988–98	28
1-7	Comparison of the distribution of 1996 research and development (R&D) expenditures and 1998 science and engineering (S&E) research space by field	28
2-1	Percentage of institutions reporting inadequate amounts of science and engineering research space by institution type and field: 1998	30
2-2	Amount and percentage of total science and engineering (S&E) research space needed by field: 1998	31
2-3	Amount and percentage of total science and engineering (S&E) research space needed by institution type: 1998	32
2-4	Institutional assessment of the quality and condition of science and engineering research space by institution type: 1998	32
2-5	Trends in the amount of science and engineering research space requiring major renovation or replacement by field: 1988–98	34

<i>Table</i>	<i>Page</i>
3-1 Trends in the amount of science and engineering research space under construction for projects costing more than \$100,000 by institution type: 1986–97	36
3-2 Trends in funds committed to construct science and engineering research facilities for projects costing more than \$100,000 by institution type: 1986–97	37
3-3 Scheduled and actual construction expenditures for projects costing more than \$100,000 for science and engineering research space by institution type: 1996–97	38
3-4 Funds scheduled for construction of science and engineering (S&E) research space and central campus infrastructure for projects costing more than \$100,000 by institution type: 1998–99	39
3-5 Trends in the percentage of institutions starting projects to construct science and engineering research facilities costing more than \$100,000 by institution type: 1986–99	39
3-6 Number of institutions starting science and engineering research facilities construction projects costing more than \$100,000 and whether construction was scheduled by institution type: 1996–97	40
3-7 Trends in the percentage of institutions starting projects to construct science and engineering research facilities costing more than \$100,000 by field: 1986–99	41
3-8 Trends in funds committed to construct science and engineering research facilities for projects costing more than \$100,000 by field: 1986–97	42
4-1 Trends in funds committed to repair/renovate science and engineering research facilities by institution type and cost of project: 1986–97	46
4-2 Scheduled and actual repair/renovation commitments for projects costing more than \$100,000 for science and engineering research space by institution type: 1996–97	48
4-3 Funds committed to science and engineering repair/renovation as a percentage of total capital project expenditures by institution type: 1990–97	49
4-4 Funds scheduled for the repair/renovation of science and engineering (S&E) research facilities and central campus infrastructure by institution type: 1998–99	49
4-5 Trends in the percentage of institutions starting projects to repair/renovate science and engineering research facilities by institution type: 1986–99	50
4-6 Number of institutions starting science and engineering research facilities repair/renovation (R/R) projects costing more than \$100,000 and whether repair/renovation was scheduled by institution type: 1996–97	51
4-7 Trends in the percentage of institutions starting projects to repair/renovate science and engineering research facilities by field: 1986–99	52
4-8 Trends in funds committed to repair/renovate science and engineering research facilities for projects costing over \$100,000 by field: 1986–99	53

<i>Table</i>	<i>Page</i>
5-1 Trends in the sources of funds for construction of science and engineering research facilities: 1990–97	56
5-2 Trends in the sources of funds for the construction of science and engineering research facilities at public institutions by institution type: 1990–97	58
5-3 Trends in the sources of funds for the construction of science and engineering research facilities at private institutions by institution type: 1990–97	60
5-4 Trends in the sources of funds for the repair/renovation of science and engineering research facilities: 1990–97	61
5-5 Trends in the sources of funds for the repair/renovation of science and engineering research facilities at public institutions by institution type: 1990–97	63
5-6 Trends in the sources of funds for the repair/renovation of science and engineering research facilities at private institutions by institution type: 1990–97	65
5-7 Indirect costs recovered from Federal grants and/or contracts included in institutional funds for science and engineering construction and repair/renovation: 1996–97	67
5-8 Major sources of funds for construction and repair/renovation of science and engineering research facilities at public and private institutions: 1996–97	67
6-1 Estimated costs for deferred capital projects to construct or repair/renovate science and engineering (S&E) research facilities by institution type, project type, and whether the project was included in an institutional plan: 1998	70
6-2 Trends in deferred need estimates included in institutional plans for science and engineering construction and repair/renovation: 1994, 1996, and 1998	72
6-3 The cost of deferred capital projects to construct or repair/renovate science and engineering (S&E) research facilities by field, type of project, and whether the project was included in an institutional plan: 1998	72
6-4 The cost of deferred capital projects to construct or repair/renovate central campus infrastructure by institution type, type of project, and whether the project was included in an institutional plan: 1998	73
7-1 Amount of instructional and research space and the percentage of institutions with science and engineering (S&E) research space by field in minority-serving institutions: 1998	77
7-2 Adequacy of the amount of science and engineering (S&E) research space and its condition by field in minority-serving institutions: 1998	78
7-3 Construction and repair/renovation of science and engineering research facilities and sources of funds in minority-serving institutions: 1996–97	79
7-4 The cost of deferred construction and repair/renovation projects by project type and whether the project is included in institutional plans in minority-serving institutions: 1998	80

<i>Table</i>	<i>Page</i>
7-5 Trends in the amount of science and engineering research space by field in the 29 original Historically Black Colleges and Universities (HBCUs): 1988–98	81
7-6 Science and engineering research facility construction and repair/renovation projects at the 29 original Historically Black Colleges and Universities (HBCUs) by project characteristics: 1986–97	82
7-7 Sources of funds for science and engineering research facility construction projects at the 29 original Historically Black Colleges and Universities (HBCUs): 1986–97	83
7-8 Sources of funds for science and engineering research facility repair/renovation projects at the 29 original Historically Black Colleges and Universities (HBCUs): 1986–97	84
8-1 Amount and distribution of space for laboratory animal facilities by institution type: 1998	86
8-2 Amount and distribution of animal housing space and laboratory animal space by institution type: 1998	87
8-3 Percentage of animal research space at each animal biological safety level by institution type: 1998	88
8-4 Amount of laboratory animal space scheduled for construction and repair/renovation: 1998–99	88
8-5 Number and percentage of institutions and the amount of funds scheduled for the construction and repair/renovation of laboratory animal facilities: 1998–99	90
9-1 Amount of biomedical research space by institution type and field: 1988–98	92
9-2 Adequacy of the amount of biomedical research space and its condition by institution type and field: 1988–98	94
9-3 Trends in the number of institutions starting biomedical research space construction projects costing more than \$100,000, the amount of space constructed, and the cost of construction, by institution type, field, and year of project start: 1988–98	96
9-4 Trends in the number of institutions starting biomedical research facilities repair/renovation projects costing more than \$100,000, the amount of space affected, and the cost of repair/renovation, by institution type, field, and year of project start: 1988–98	98
9-5 Source of funds for the construction of research facilities at institutions with biomedical research space by year of project start and institution type: 1990–97	99
9-6 Source of funds for the repair/renovation of research facilities at institutions with biomedical research space by year of project start and institution type: 1990–97	101
9-7 Estimated costs for deferred capital projects to construct or repair/renovate biomedical research facilities by institution type, type of project, and whether project was included in an institutional plan: 1998	102

<i>Table</i>		<i>Page</i>
9-8	Amount, condition, adequacy, construction, and repair/renovation of biomedical research facilities at Historically Black Colleges and Universities (HBCUs) compared to all academic institutions: 1998	103
9-9	Amount, biosafety level, and scheduled construction and repair/renovation of animal research space at institutions with biomedical research space by institution type: 1998	105

LIST OF OVERVIEW FIGURES

<i>Figure</i>		
1	Amount of science and engineering research space by institution type: 1998	3
2	Costs of construction and repair/renovation of science and engineering research facilities begun in 1996 and 1997, scheduled for 1998 and 1999, and deferred costs in 1998–99	6
3	Source of funds for the construction of science and engineering research space by control of institution: 1996–97	8
4	Source of funds for the repair/renovation of science and engineering research space by control of institution: 1996–97	8
5	Trends in the amount of science and engineering research space by institution type: 1988–98	11
6	Amount of science and engineering research space needing major renovation or replacement by field: 1988 and 1998	12
7	Trends in expenditures on science and engineering research space construction and repair/renovation starts by institution type: 1986–97	14

LIST OF CHAPTER FIGURES

1-1	Amount and percent of science and engineering (S&E) space and non-S&E space by institution type: 1998	25
3-1	Trends in science and engineering construction expenditures by type of institution: 1986–97	37
4-1	Trends in funds committed to science and engineering research facilities repair/renovation projects costing more than \$100,000 by institution type: 1986–97	47
6-1	Cost of construction and repair/renovation of science and engineering research facilities begun in 1996 and 1997, scheduled for 1998 and 1999, and deferred costs in 1998 and 1999	71
